EXPIERENCE

2569 January - current

HAUPCAR COMPANY LIMITED

Design and develop a complete internal organization management system (Fullstack) consisting of Admin Portal for internal departments and Partner Portal for external partners with Authentication system with JWT and Role-Based Access Control to maintain data security. Use technology Next.js, React, TypeScript, Tailwind CSS for Frontend and Node.js API Routes, MySQL, MongoDB for Backend and Database to increase work efficiency.

Tech Stack: Next.js | React | TypeScript | Tailwind CSS | MySQL | MongoDB | JWT | Node.js

2567 April - 2569 January

Health Up Company Limited

I am responsible for developing information systems to support the organization and address customer requirements. My work involves mobile application development using Flutter, as well as web application development using Angular. I also design UX/UI using Figma, and implement user interfaces with HTML, CSS, and JavaScript to ensure alignment with the design specifications. Additionally, I develop responsive layouts to provide an optimal user experience across all device sizes. I am also responsible for preparing development documentation and manuals for the systems created

2566 August - 2566 November

Bangkok Expressway and Metro Public Company Limited

I am responsible for maintaining and managing internal systems within the organization, particularly systems that support centralized operations. My work involves utilizing C#, SQL Server, K2, .NET Framework, and developing Stored Procedures to ensure stable and efficient system functionality. I also prepare comprehensive system user manuals to enable internal users to operate the systems effectively.

Projects

• Graduation Project

• Web Quiz

This project aims to develop a quiz system based on Bloom's learning theory for use during classroom instruction. Teachers can manage subjects, create, delete, and edit quizzes, including multiple-choice questions (2-4 options) and fill-in-the-blank questions with images. Students can access and complete quizzes to facilitate real-time learning assessment.

• Bangkok Expressway and Metro Public Company Limited

• MPR

This system is developed using the K2 software and utilizes Stored Procedures to manage user data. It is designed to record details of engineering material procurement for use in the maintenance and repair of the company's electric trains.

• Inventory

To enhance efficiency and address existing challenges, this system has been developed using ASP.NET Web Apps and utilizes Stored Procedures for data management. It is designed to streamline inventory control and facilitate the seamless distribution of products across various departments within the company.

• Health Up Company Limited

• Hug online

The system has been improved and upgraded with Flutter for the front-end, .NET for the back-end, and SQL Server for data storage. It is designed to facilitate the sale of the company's pharmaceutical products, enabling users to efficiently browse and purchase items.

• UI Dnonline

The frontend is newly developed using HTML, SCSS, and TypeScript, with Angular as the framework.

• POS

The project involves designing a branch sales system using Figma for system design, followed by further development using Angular.

• Haupcar Company Limited

• Connect Evplaza Systems

Developed a web-based car rental management system—comprising both frontend and backend components—that integrates with the EVPlaza platform. The system was built using React and Next.js, with communication handled via RESTful APIs.

• subscription

The project I'm working on right now. A management platform for a car subscription service – covers inventory, reservations, revenue tracking, EV charging stations, and pricing plans. I handle both the frontend and backend.

• subscription Imotor Landing Page

This system was developed to facilitate vehicle rentals for iMotor customers and integrate with a subscription dashboard for administrative management; it features a mobile-friendly layout and was built using Vite.js.

• Chat Management

A B2B SaaS platform I'm building right now, full-stack. External businesses – cafés, car rentals, condos, and more – can chat with customers to manage and track their bookings. Currently integrating Gemini AI into the chat, offered through subscription plans.

• Fleet Management

The project I'm working on right now, full-stack. An internal fleet management system for a car subscription/rental company – covering reservations, driver assignment & shift scheduling, airport transfer bookings, and real-time vehicle utilization tracking.

• Master's Thesis · KMITL

• AI Detect Bubble Quiz

My Master's thesis project. A system that grades multiple-choice exams automatically using Computer Vision and AI – scans answer sheets, checks them, and outputs score reports per student and overall. Can export to PDF and Excel. Built it to be actually usable in schools.

Certifications

- FOR THE SUCCESSFUL COMPLETION OF IE.Tech English Exit Exam Preparation (Ist) 2022
- On the occasion of the Academic Conference of the Future Career Professionals Organization of Thailand, the Provincial-Level Competition in Professional and Fundamental Skills, Samut Prakan Province, Academic Year 2022.
- CU-TEP Score Report Chulalongkorn University Academic Testing Center (Total 42)
- MathWork Training Services for successfully completing the learning path: Data Analysis in MATLAB
- MathWork Training Services for successfully completing the learning path: Machine Learning Onramp
- MISO Academy – Microsoft Copilot Chat, Certificate for successfully completing 1 day of Generative AI and Microsoft Copilot Chat, presented on 31 October 2015
